Finance OS

Marketplace Reconciliation. Reimagined.

Enterprise-grade reconciliation & AI-powered financial intelligence for D2C brands on Myntra, Amazon and Flipkart.

3% to 7% of your marketplace revenue is silently leaking.

Every year, direct-to-consumer brands selling on Myntra, Amazon and Flipkart lose between 3% and 7% of their revenue to invisible commission leakage. Miscalculated commissions. Unbilled returns. Misapplied logistics charges. Duplicate deductions. For a brand doing ₹100 crore a year, that is up to ₹7 crore of pure margin, evaporating silently, month after month, into settlement files no one has the time to audit.

₹7 Cr

Est. annual leakage on a
₹100 Cr D2C business

40+

Fee components in a single
Myntra settlement file

21,614

Order lines processed by
Fundle in a single upload

< 60 sec

Parse + calculate a full
monthly report end-to-end

The settlement statement is not a bill — it's a 40-column data dump.

Excel breaks at scale

Tens of thousands of order lines, dozens of fee components, VLOOKUP hell. Errors compound. Cross-checks fail silently.

Rules change quarterly

Commission slabs shift. Zone-based logistics fees are refreshed. Rate cards get versioned. Static Excel models go stale in weeks.

Returns fragment the picture

A single order can span multiple report rows — Sales, Return, Return+DTO, RTO, Internal Cancellation. Getting the net right is non-trivial.

Finance teams give up

Without a purpose-built system, leakage becomes the cost of doing business. Recoveries stop happening. Margin quietly erodes.

One platform. Six modules.

Zero leakage.

Fundle Finance OS is a purpose-built marketplace reconciliation platform for finance and operations teams. Ingest raw marketplace reports, calculate expected settlement with configurable business rules, reconcile against actuals, and recover every rupee of leakage — with AI-powered financial intelligence on top.

INGEST

Parse Myntra sales & settlement reports in < 60 seconds

MASTERS

No-code rule engine for commissions, GT, return & fixed fees

CALCULATE

Component-level fee expectations, drill-through, audit-ready

RECONCILE

Match actual vs expected. Rank by impact & ageing

RECOVER

Track each rupee of leakage to closure — with audit trail

AI INSIGHTS

LLM-authored briefs on health, velocity and margin decay

Ingest & Canonicalise

From raw Excel to a query-ready sales ledger.

Native Myntra parser

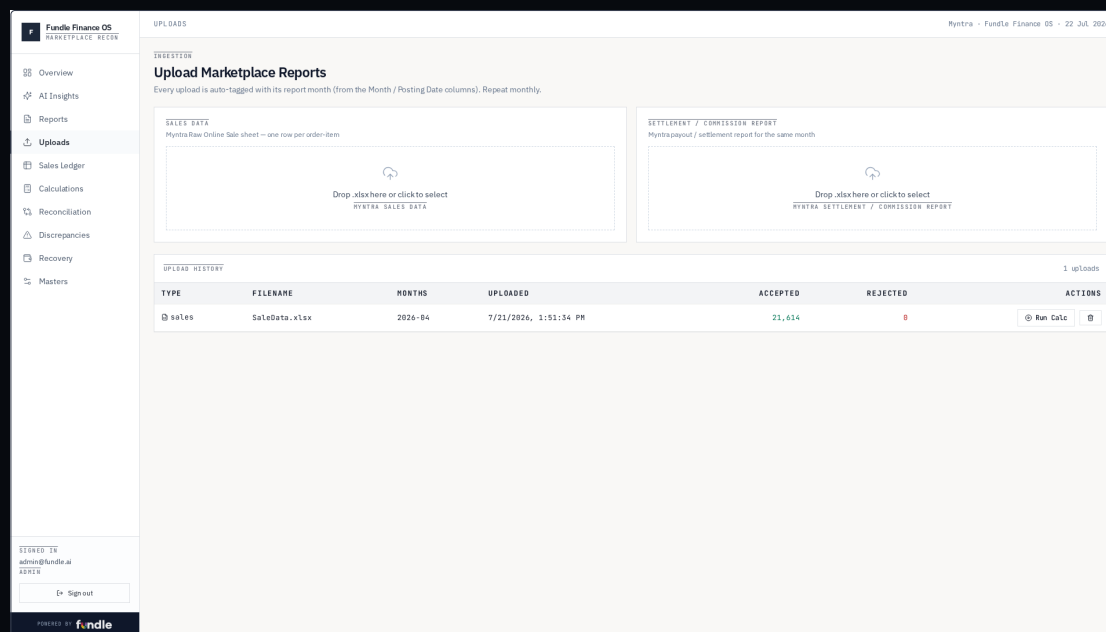

Ingests raw sales and settlement Excel reports. Handles positive & negative NSV, returns, DTOs, RTOs, and internal cancellations natively.

Canonical sales ledger

Normalises SKUs, categories, zones, sub-category levels. Every order line is now query-ready, filterable and drill-through.

Period-aware

Month, quarter, YTD and annual views out of the box. No date-formula nightmares.

KEY CAPABILITY

21,614 order lines processed end-to-end in under 60 seconds — no VBA, no manual clean-up.

Rule Engine + Fee Calculator

Finance owns the logic. No engineers required.

No-code masters

Commission slabs, GT logistics charges, fixed fees by ISP band, and zone-level return fees — all configurable through a spreadsheet-style editor.

Excel round-trip

Import from your existing rule cards. Export for finance audit or legal review. Every version tracked.

Strict expected-fee math

Commission on NSV - GT. Pre-GST + GST split. Level x Zone return fees. Order-type aware (Sales, Return, Return-DTO, RTO, Cancel).

KEY CAPABILITY

No fallbacks. No dummy defaults. If a rule is missing, the row is flagged 'unmapped' with a precise reason — so ops can fix the master and rerun.

Discrepancies, Recovery & AI Insights

Turn leakage into a workflow, not a wish.

Reconciliation with tolerance

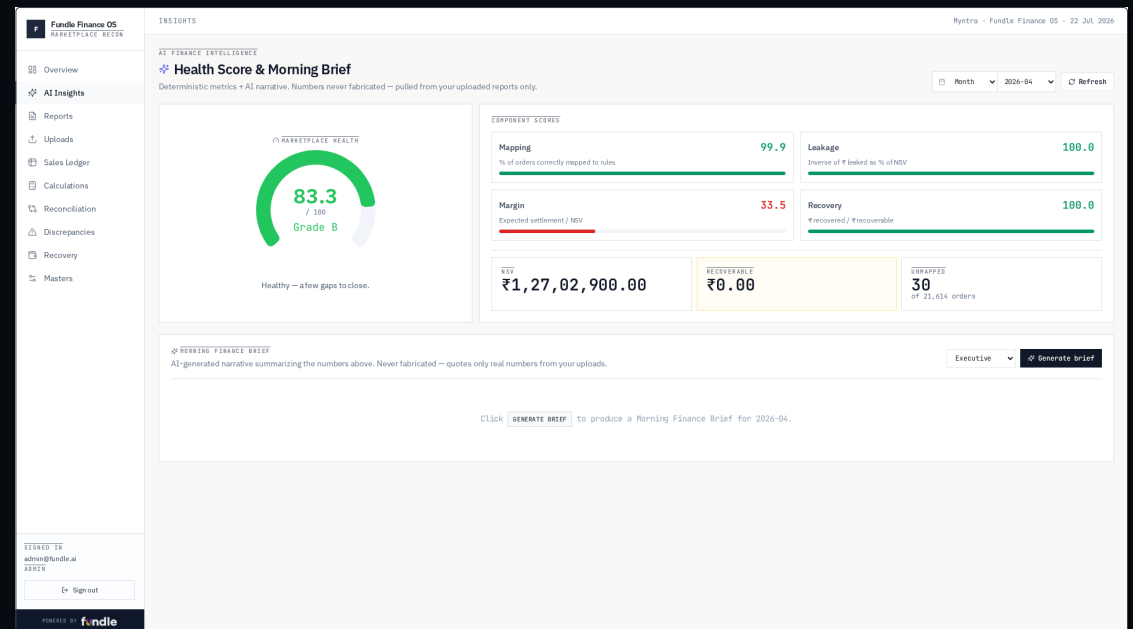

Component-level match of actual vs expected. Configurable tolerances. Discrepancies ranked by financial impact, ageing and severity.

Recovery case management

Each rupee of leakage becomes a tracked case — status, priority, evidence attachments, notes, recovered amount, and full audit trail.

AI Financial Intelligence

Fundle's LLM-powered engine reads your entire reconciliation dataset and generates plain-English briefs: health scores, return velocity alerts, category-level margin decay, and root-cause narratives.

KEY CAPABILITY

Frontier LLMs · plain-English CFO-ready narratives · category & zone drilldowns · monthly health scores.

Stop leaking. Start reconciling.

Book a 30-minute walkthrough. See your own numbers reconciled — live.
